

Project Overview: TaskFlow AI Assistant

Candidate: Kgomoitso Matane

Problem Statement

Professionals across industries lose significant time on repetitive daily tasks, including drafting professional communications, summarizing information, planning schedules, and conducting research. This project aims to resolve this challenge by creating an AI-driven assistant that simplifies and automates these processes.

Solution Overview

TaskFlow AI is a comprehensive productivity suite designed to act as a workplace companion. It provides tools to automate administrative tasks, allowing professionals to focus on high-value activities.

Core Features

- **Smart Email Generator:** Generates context-based professional emails with adaptive tones.
- **Meeting Notes Summarizer:** Converts lengthy transcripts into concise summaries with key action items and deadlines.
- **AI Task Planner Scheduler:** Creates structured daily plans, prioritizing tasks by urgency and importance.
- **AI Research Assistant:** Simplifies complex information and provides key insights.
- **AI Chatbot Interface:** An interactive interface for real-time user queries.

Tools Used

This project leverages modern AI tools including LLMs (Large Language Models) via API, React for the user interface, and Tailwind CSS for responsive, modern design.

Challenges & Solutions

Challenge	Solution
AI Hallucinations/ Bias	Implemented mandatory user review steps and prominent ethical disclaimers.
Complex Prompting	Utilized structured system roles and constraints to ensure output consistency.
UX/UI Complexity	Designed modular tabs to manage multiple assistant functionalities seamlessly.
